Portfolio : https://santhoshkumarraju.github.io/portfolio.in/

Summary:

- DevOps Engineer with 3+ years of experience designing, automating, and operating scalable AWS cloud infrastructure supporting 100+ microservices across development, QA, and production environments. Specialised in Infrastructure as Code (Terraform, Ansible), CI/CD automation (Jenkins), container orchestration (DockerSwarm, Kubernetes), and observability (Prometheus, Grafana, ELK Stack). Improved deployment velocity by 50%, automated 60% of infrastructure workflows, reduced MTTR by 40%, and maintained 99.9% production uptime.

Core Technical Skills:

- **Cloud Platform** : AWS (EC2, S3, VPC, IAM, ALB, NLB, Route53, Auto Scaling, CloudWatch, EBS)
- **CI/CD** : Jenkins
- **Containerization** : Docker, Docker Compose
- **Orchestration** : Kubernetes, Docker Swarm
- **Infrastructure as Code** : Terraform, Ansible
- **Monitoring & Logging** : Prometheus, Grafana, ELK Stack, CloudWatch
- **Messaging Systems** : RabbitMQ (3.13 → 4.2), Apache Pulsar
- **Networking** : VPC Design, Security Groups, NACLs, Reverse Proxy (Traefik)
- **Databases** : MySQL, PostgreSQL
- **Operating Systems** : Linux (Ubuntu, CentOS)

PROFESSIONAL EXPERIENCE:

DevOps Engineer – CstoreIQ

Oct 2024 – Present | Hyderabad, India

Highlights:

- Improved deployment velocity by 50% through CI/CD automation.
- Reduced infrastructure provisioning time by 60% using reusable Terraform modules.
- Achieved 99.9% uptime across production systems.
- Reduced MTTR by 40% via centralised monitoring and proactive alerting.

Key Responsibilities:

- Architect and maintain AWS infrastructure supporting 100+microservices across multiple environments.
- Design reusable Terraform modules and implement configuration management using Ansible.
- Build and manage Jenkins CI/CD pipelines enabling 20+ zero-downtime deployments weekly.
- Containerise legacy applications and manage Docker Swarm clusters.
- Deploy and manage Docker Swarm workloads for scalable orchestration.
- Implement centralised logging using the ELK Stack (Elasticsearch, Logstash, Kibana).
- Configure Prometheus and Grafana dashboards for real-time performance monitoring.
- Execute zero-downtime RabbitMQ upgrade from v3.13 to v4.2.
- Deploy Apache Pulsar behind an AWS Application Load Balancer.
- Optimise harbour registry lifecycle policies to improve artifact governance and storage efficiency.
- Configure secure VPC networking, including public/private subnets, NACLs, and security groups.

TechOps Engineer — YVS
Aug 2024 - Sep 2024 | Hyderabad, India

Highlights:

- Improved release stability through structured deployment coordination.
- Reduced recurring production issues via proactive monitoring and log analysis.

Key Responsibilities:

- Coordinate application deployments across development, QA, and production environments.
- Monitor system logs, application metrics, and infrastructure health using Prometheus and Grafana.
- Troubleshoot L2-level infrastructure and configuration-related performance issues.
- Validate client data ingestion pipelines and ensure data consistency.
- Collaborate with development teams to debug API failures and database performance bottlenecks.
- Maintain system reliability through continuous monitoring and operational support.

Linux Support Engineer — MethodHub
Mar 2023 – Aug 2024 | Hyderabad, India

Highlights:

- Supported production Linux environments handling L2 infrastructure escalations.
- Improved monitoring visibility through alert configuration and log analysis.

Key Responsibilities:

- Administer and maintain Linux servers (Ubuntu, CentOS) in production environments.
- Resolve L2 infrastructure and deployment-related issues.
- Configure monitoring alerts and perform root cause analysis for system failures.
- Assist development teams in troubleshooting application deployment issues.
- Perform system health checks and patch management activities.

AWS Intern — Conduira
Sep 2022 – Jan 2023 (Training Program) | Remote

Highlights:

- Designed scalable 2-tier and 3-tier AWS architectures.
- Gained hands-on experience across 10+ AWS services.

Key Responsibilities:

- Provision EC2 instances and configure IAM roles and policies.
- Design VPC architectures with public and private subnets.
- Configure ALB, NLB, and Auto Scaling groups.
- Implement static website hosting using S3.
- Set up CloudWatch monitoring and logging solutions.

Certifications:
- AWS Certified Cloud Practitioner — Issued Jan 2023
  Credential: https://www.credly.com/badges/a1647840-da92-45d1-b1c5-70551fa537c8/publicurl

Education:
Bachelor of Technology (B.Tech) — REVA University 2017 – 2021 CGPA: 8.4/10
